

Mounting options

You have total flexibility in where you place your VM6s, thanks to a range of beautifully-engineered mounting options.

Each VM6 is supplied complete with a table stand and wall bracket. The FS-VM6 floor stand is also available. Whichever mounting option you choose, hooking your VM6s up to your system is easy.

The stands and wall bracket all include a signal connection at their base; all you need to do is slot the speaker into place, and the connection is automatically made via a pre-wired support.

The VM6 includes the facility to be mounted horizontally as well as vertically, allowing it to operate as a centre speaker in a home theatre installation, sitting above or below the TV screen.
