

LM1

**HAVE LEISURE MONITOR—
WILL TRAVEL**

The LM1 Leisure Monitor — a triumph of loudspeaker miniaturisation. Ideal for restricted home environments. A new dimension to sound on the move — in the car, caravan or boat.

All the experience of B&W in professional monitoring technology brought down to size in a two-driver precision monitor system. The result — near perfection. Superb transient behaviour with minimum colouration and therefore quite dramatically enhanced realism

of all transient information.

Entire system is designed around a diecast front panel assembly containing drive units, switching, crossover filter and protection networks. This allows scope for a choice of two systems:

LM1 standard system, complete with its own enclosure.

LM1/PM front assembly with three alternative mounting spacers and all necessary fixing hardware.

Special marine version has encapsulated crossover components and additional plating for protection against salt water.

SPECIFICATION

Frequency Response	95Hz to 20kHz \pm 4dB
Sensitivity	'0' mode (8 ohms) 81dB at 1m. '+' mode (4 ohms) 85dB at 1m.
Drive Units	Two, horizontally/vertically in-line.
Dimensions	Height: 155mm (6in). Width: 240 mm (9½in). Depth: 195mm (7¾in).
