

# ASW™2500

## Active Subwoofer

### Product Summary

- The ASW 2500 features a 10-inch long throw paper/Kevlar® cone driver and 700W amplifier all within a compact domestically acceptable enclosure.
- A good subwoofer should be capable of conveying the dramatic low-frequency effects of movies in an articulate way and deliver dynamic attack when called upon to do so. It should be able to complement and blend in with the other speakers in the installation, without standing out as a separate add-on. And preferably, you should be aware of its sound – not size.
- The robust drive unit features an extremely stiff diaphragm assembly – a resin-bonded mixture of paper and Kevlar® fibres – to withstand deformation under stress.

### Technical highlights

- The linear MOSFET design offers minimum distortion.
- Soft-limiting circuits avoids harsh clipping sounds should the signal reach overload levels.

<b>Description</b>	Active closed-box subwoofer system	<b>Net Weight</b>	22.7kg (50lb)
<b>Drive Unit</b>	1 x 250mm (10 in) paper/Kevlar® cone long-throw drive unit	<b>Dimensions</b>	Height: 315mm Width: 315mm Depth: 400mm
<b>Frequency response</b>	± 3dB at 22Hz - 40-120Hz adjustable (EQ at B)	<b>Finishes</b>	Cabinet: Black Ash or Cherrywood vinyl Grille: Black cloth
<b>Amplifier</b>	700W continuous
