

Widescreen for your ears

Panorama might be a single unit, but it's certainly not a single speaker. Housing six separate speaker channels: two front channels, two rear, one centre, and one subwoofer, all with their own individual class D-amplifier. These units are angled in such a way that they direct beams of sound outwards to reflect off the walls and back to the listening areas. Combine this with very powerful digital signal processing, and you get a remarkably lifelike surround sound experience.
